QADEER AHMED

Full Stack Software Engineer | React ● TypeScript ● Python (ERPNext/Frappe) | AI/ML

Karachi, Pakistan | +92 301 2590076 | qadeerahmed.tech@gmail.com
LinkedIn: linkedin.com/in/qadeer-ahmed-24310627b | GitHub: github.com/QADEER-AHMED-cs

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 6 months of professional experience building role-based web portals and dashboards, live in production, using React.js, TypeScript, and an ERPNext (Frappe/Python) backend. Delivered Student/Parent, Teacher, and Employee (ESS) portals for an online school, covering REST API integration, authentication and access control, KPI dashboards, and workflow automation. BSCS graduate with hands-on AI/ML project experience (Transformers, CNNs, YOLO, OpenCV). Seeking Software Engineer, Full Stack, or AI Engineer roles.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, Java, C
- **Frontend:** React.js, Vite, Tailwind CSS, React Router, Framer Motion, Context API & Custom Hooks, React Native, HTML5, CSS3, Responsive UI
- **Backend & APIs:** ERPNext / Frappe (Server Scripts, DocTypes, Automation), REST API Integration, Node.js (Express), Session & CSRF Authentication, Role-Based Access Control, Google OAuth, Postman
- **AI / ML:** TensorFlow, PyTorch, Scikit-learn, Hugging Face, OpenCV, NLP, Computer Vision, MediaPipe, Prompt Engineering
- **Databases & Data:** MySQL, SQLite, MongoDB, SQL, Pandas, NumPy, Power BI
- **Tools & Practices:** Git, GitHub, VS Code, Claude Code, Cursor AI, Agile/SDLC, Debugging, Manual & UAT Testing

PROFESSIONAL EXPERIENCE

Junior Full Stack Developer – Learn Academy (Online School)

Apr 2026 – Sep 2026

Karachi, Pakistan | On-site | 6 months

- Built and maintained live, role-based portals and dashboards for Students & Parents, Teachers, and Employees (ESS) with React.js, TypeScript, and JavaScript, serving all user groups from a single ERPNext backend.
- Integrated ERPNext DocType REST APIs into portal frontends and built KPI dashboards that surface academic and operational data to staff, teachers, and families.
- Implemented authentication and role-based access control (session + CSRF, route guards) so each role sees only its permitted data and actions.
- Automated course scheduling in ERPNext: built a script that takes one imported week of schedule as a template and auto-generates schedules for any future date in the same format; added an “Extend Schedule” button that generates future months of schedules in one click.
- Developed additional ERPNext Server Scripts and Python (Frappe) automations for recurring workflows; tested and debugged REST APIs with Postman.
- Fixed bugs and improved UI/UX, responsiveness, and performance across existing portals; used Git/GitHub for version control and AI tools (Claude Code, Cursor AI) to speed up development and debugging.

PROJECTS

Learn School – Student & Parent Portal

React, TypeScript, Vite, Tailwind CSS, ERPNext

- Dual Student/Guardian portal with child switcher covering attendance, results, report cards, schedules, fees, notice board, classroom, and profile modules; session + CSRF auth with role enforcement.
- Built an ID Card Request workflow (photo upload, manual crop with zoom/rotate, admin approval via ERPNext DocType, PDF print) and MediaPipe face detection that auto-crops avatars to passport size.

Learn School – Employee Self-Service (ESS) Portal

React, TypeScript, Vite, Tailwind CSS, Node.js/Express, ERPNext

- Three role-based experiences (Employee, Teacher, Academic/Admin) with route guards, covering attendance, leave, payroll/salary slips, tasks, assignments, assessments, reports, and KPI dashboards.
- Built admin workflows for leave approvals, payroll processing, employee/student management, and revenue and attendance reports; Express helper server with Google OAuth for classroom integration.

Multimodal Suicide Risk Detection (AI / NLP / CV) – Final Year Project

Python, TensorFlow, Hugging Face, OpenCV

- Built a multimodal deep learning model combining text and visual signals with Transformers (Hugging Face) and CNNs for suicide-risk prediction.

Brain Tumor Detection & Segmentation (YOLOv11 + SAM2) – Personal Project

Python, YOLOv11, SAM2, OpenCV

- Developed an MRI tumor detection and segmentation pipeline using YOLOv11 for detection and SAM2 for segmentation.

EDUCATION

Bachelor of Science in Computer Science (BSCS) – IQRA University, Karachi | CGPA: 3.12 2021 – 2025
